

Strategy

- **Section 23 Implementation**

- Boilers Option 1: lower the threshold of individual boilers from 50 MW to 20/10 MW.
- Boilers Option 2: Where combined capacity = > 50MW thermal, the facility must be licensed
- Asphalt: Clarity to be provided in the NF review and possibly through the notice.

- **Controlled fuels declaration**

- There are mandate issues
- Avoided overregulation: consider the current tools to achieve same objective
- Recommendation: We must explore using this tool for non-conventional fuels.

Strategy

- **Other sources of pollution (sugar burning, vehicles, biomass, etc.)**
 - National strategies have been developed and communicated to relevant departments
 - Recommendation: Use bylaws and local strategies (eco-directives etc.)
 - Creating awareness between different sections within the municipality

- **Synergies between climate change and AQ**
 - No further discussions
